

# Patient Experience Flow

## Onboarding

Develop the flow patients have when they want to set up a medical ID (can be interfaced with Apple health kit as base) to then add their primary care physician, hospital and subsequent documents from their visits.

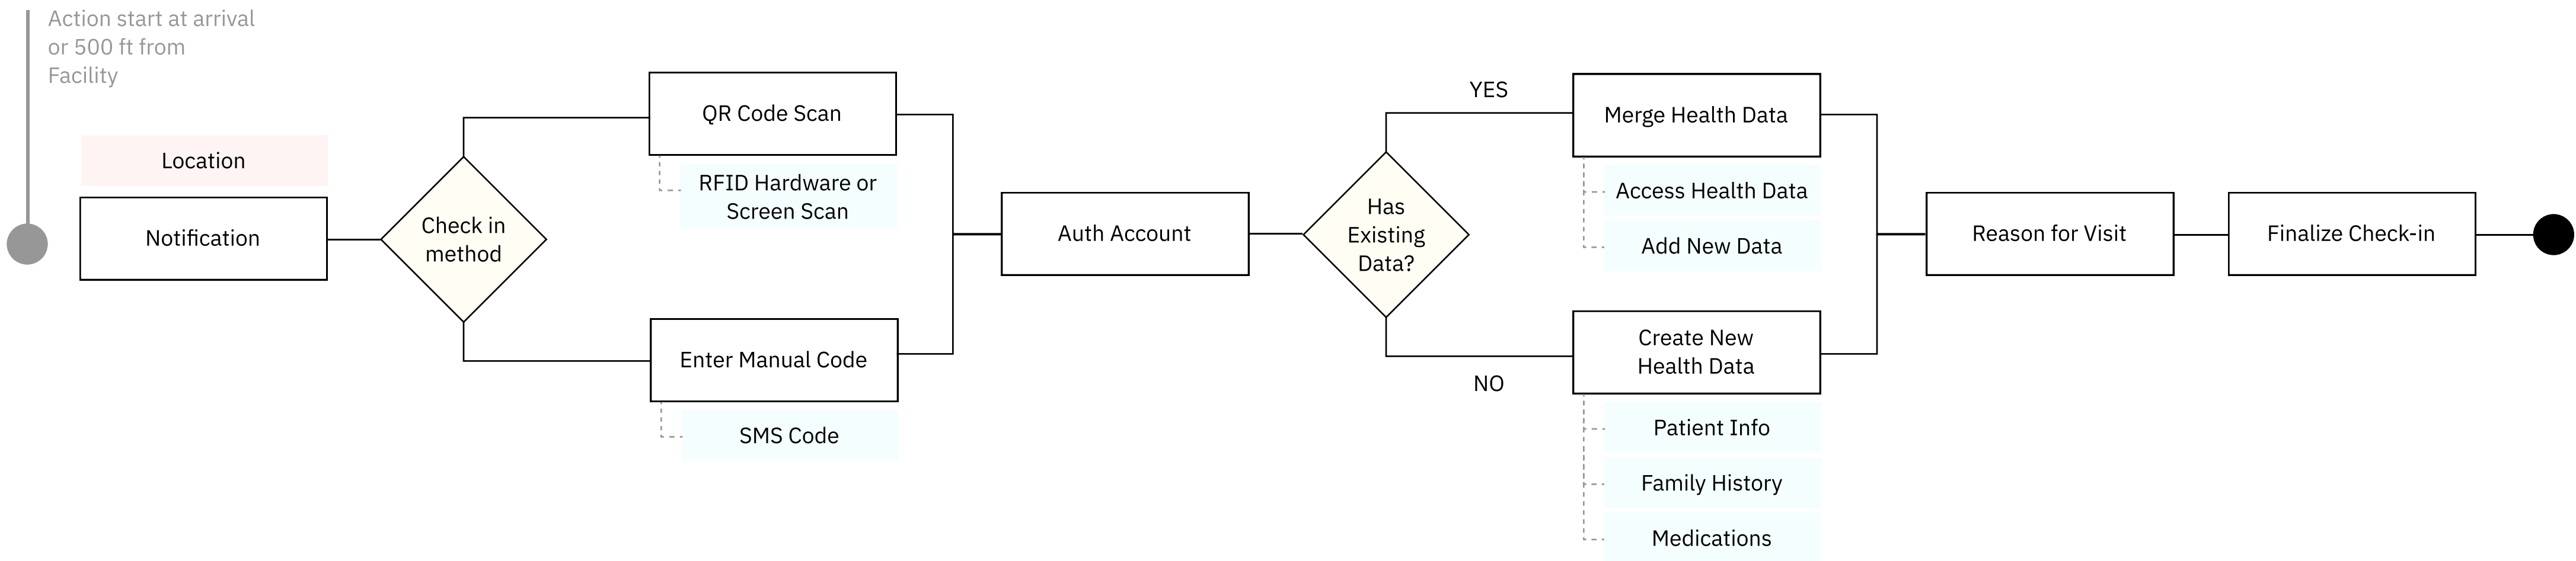

1. Creating New Account Flow
2. Adding Insurance + Primary Care or Hospital
3. Setting up payments

## Visit Sign-In

Develop flow patients have to electronically send their health data to an urgent care facility during a sign in process.

1. Checking in
2. Adding information

## Discharge Checkout

Develop flow patients have during payment during / after hospital visit -- (could be a token / coin opportunity here, worth exploring after the challenge if selected) and capture discharge + prescribed medicine orders.

1. End visit checkout
2. Payment
